

ANLEN JEBAN

Motivated Computer Science student

☎ 7806889962 ✉ anlenjeban7@gmail.com 🔗 <https://www.linkedin.com/in/an1en> 🔗 <https://github.com/An1en> 🌐 Website
📍 Chennai, India

PROFESSIONAL SUMMARY

Motivated Computer Science student specializing in **cybersecurity** and **software development**. Proficient in **Python**, **Linux**, and **Nmap**, with a strong emphasis on **web penetration testing**, **Active Directory**, and **network analysis**. Skilled in **threat detection**, **vulnerability assessment**, and applying analytical problem-solving abilities to secure and defend complex environments.

EDUCATIONS

Sathyabama Institute of Science and Technology

Bachelor's in Computer Science and Engineering

Aug 2022 - May 2026

CGP : 7.00

PROJECTS

TMAP: NETWORK RECONNAISSANCE A PORT SCANNING FRAMEWORK | Github

Jan 2026

Tmap enhances the network discovery phase by executing rapid scans for open ports and integrating targets into a comprehensive deep enumeration engine. It replaces manual input with an intuitive, interactive terminal interface.

- **Engineered** an interactive network discovery framework with an intuitive terminal UI, reducing initial reconnaissance time by **over 30%** compared to manual command-line inputs.
- **Automated** smart port parsing and deep enumeration workflows across **1,000+** potential ports, systematically extracting OS guesses, NSE vulnerability scripts, and SSH keys.
- **Streamlined** deployment by architecting a zero-dependency architecture, enabling **1-click** setup via a native bash installer.

Technologies / Tools Used : linux, python, nmap, shell, network

SHADOW AI — CYBERSECURITY PENTESTING ASSISTANT | Vercel

Jun 2026

Developed a full-stack, **AI-powered platform** that combines a Matrix-themed professional portfolio with a real-time cybersecurity assistant chatbot. Key features include a live penetration testing chatbot that retains full session context, automated professional report generation from conversation history, exploit development guidance, and vulnerability analysis, all powered by real-time LLM integration via the OpenRouter API. **Automated Penetration Testing Workflow** significantly reduces post-engagement reporting time by 80% by eliminating manual documentation through full session context recording and auto-generating professional security reports that include extracted findings, tools used, and remediation recommendations.

- **AI-Powered Security Guidance** delivers real-time expert assistance for vulnerability assessment, exploit development, and privilege escalation techniques, facilitating faster decision-making during security engagements.
- **Intelligent Session Intelligence** utilizes LLM-based context retention to track all commands, target data, and vulnerability classes discussed, compiling structured penetration test reports without manual data entry.
- **Modern Full-Stack Architecture** designed with Next.js 14, TypeScript, and Tailwind CSS, featuring real-time API integration via OpenRouter, serverless deployment on Vercel, and a custom Matrix-themed interface that showcases frontend engineering and API development skills.

Technologies / Tools Used : Python, FastAPI, OpenRouter API, Vercel, Next.js 14, TypeScript, Tailwind CSS

CERTIFICATIONS

- **Certified Red Team Analyst (CRTA)** - Cyberwarfare Lab
- **Certified Active Directory Red Team Specialist (AD-RTS)** - Cyberwarfare Lab
- **Fundamentals of Encryption & Quantum Safe Techniques** - IBM
- **Red Hat Certified System Administrator** - Virtual Instructor-Led Training, Chennai
- **Python Programmer** - NICEDT, Kanniya Kumari

SKILLS

Databases :	MySQL
Frameworks & Libraries :	Metasploit Framework, Burp Suite, Gobuster, Hashcat, cURL, Evil-WinRM, John the Ripper
Languages :	Tamil, English
Programming Languages :	Python, SQL
Soft Skills :	Cybersecurity, Networks, Teamwork, Communication, Decision Making, Problem Solving
Tools & Platforms :	Nmap, Git, GitHub, Linux, VS code, CI/CD

AWARDS & ACHIEVEMENTS

CyLab

Mar 2025

Capture The Flag (CTF) Challenges — CyLab Security Academy

- **Completed over 55 CTF challenges** at CyLab Security Academy, demonstrating expertise in **Cryptography**, **Forensics**, and **Web Exploitation**.
- Utilized analytical skills to tackle security challenges, building a strong foundation in **penetration testing** and **vulnerability assessment**.

Proof: CyLab Anlen

Secured 8th position in CloudSEK Hiring CTF 2026 among global participants.

Aug 2026

CloudSEK

Successfully exploited **OSINT** and **Web Application** vulnerabilities across multiple challenges, including pivoting from a leaked username to an email via GitHub API and executing a Host Header Injection attack for full admin account takeover. Demonstrated expertise in reconnaissance, JWT analysis, API fuzzing, XXE testing, and attack surface enumeration. Published a detailed writeup on **Medium** documenting the full exploitation methodology and vulnerability analysis. <https://medium.com/@anlenjeban7/cloud-sek-ctf-2026-56a8e24508eb>

Published Cybersecurity Research Writer — Medium

Jun 2026

- Published **HackTheBox Opsie Walkthrough** on Medium, analyzing **OWASP Top 10 vulnerabilities** (IDOR, File Upload, SUID PATH Hijacking) and offering effective remediation strategies medium.com/@anlenjeban7.
